DNA Key Fob

Materials:

Two pieces of 550 paracord cut to 2 feet each

Split Ring

{Cost for this project starts at $2.40}

Step 1: Bring about five inches of both cords through the split ring. Lay the cords so the short sides are between the long sides as shown.

Step 2: Bring the right cord over the short center cords and under the left cord.

Step 3: Take the left cord behind the center cords and up through the loop created by the cord on the right.

Pull the left and right cords tight. Then repeat steps 2 and 3 until you have about an inch left on the center cords.
Once you have about an inch left, trim and melt the left and right cords. You can also trim the center cords or leave them.

This is a great way to use your shorter leftover scraps of paracord.
