Step 1: Join your two cords together. Measure the desired bracelet length from the joint and insert that point down through one end of your buckle.

paracordgalaxy.com

Step 2: Insert both cord ends through the loop in the cord and pull tight to form a knot.

paracordgalaxy.com

Step 3: If using a bead, thread it onto both cords then insert the ends down through the other end of your buckle. You'll want the joint just past the buckle to hide in the back of the bracelet. Double check the length and adjust if necessary.

Step 4: Bring your short piece of cord up between the two core strands of the bracelet and move it up out of the way.

This made an 8 inch bracelet. We used 550 paracord, but found it very difficult to get four strands through the bead. For this reason, we recommend using 425 or 325 paracord. If not using a bead, 550 paracord can be used with no trouble.
