Manta Ray Bracelet

Materials:

- Two 8 ft pieces of 550 paracord
- ¾ inch buckle
- Fid or lacing needle

*See our four strand double cow's hitch tutorial for step 1.

{Cost for this project starts at $3.98}

Step 1: Join your two cords together and make a four strand double cow's hitch with the color you want to be on the outside on the right side of the buckle.

Step 2: With cord A, weave it over, under, over, and under the four core strands as shown.
Step 3: With cord B, weave it over and under the first two cords below A. Bring B up between the second and third cords above A and wrap it down and over cord A and the third cord. Then bring it up through the loop created by cord A.

Step 4: Pull tight. We found it easiest by holding the core strands and pushing up on the weave. Continue holding the core strands and pull cord A then cord B until all is tight.

Step 5: Weave A over, under, over under as before only going right to left this time.

Step 6: Weave B as before going left to right. Tighten as before.

Repeat steps 2 through 6 until you reach the end of the bracelet.

You'll want to use your fid to finish the last row or two.
Carefully trim and melt the ends.

Use your fid to weave the ends under a couple of cords in the back of the bracelet.

This made a 9 inch bracelet. The weave is about 1 3/8 inch wide.
