Multi-tool Holder

Materials:

About 8-10 feet of 550 paracord
About 2-3 feet of 550 paracord
Lacing needle or FID

{Cost for this project starts at $5.98}

Step 1: Fold your long piece of paracord in half and loosely wrap your multi-tool around three sides with a little extra for a loop if desired. If you want to add a clip, thread it to the place shown.

Step 2: Fold both sides where your clip is and lay the cords with the working ends on the outside and the center fold in the middle.

Step 3: Bring the right cord over the center cords and under the left cord.

Step 4: Bring the left cord behind the center cords and up through the loop created by the right cord. Pull tight.
Step 5: Measure your center cords to be sure it is still long enough to wrap around your multi-tool. Continue the cobra weave by bringing the left cord over the center cords and under the right cord.

Step 6: Bring the right cord behind the center cords and up through the loop created by the left cord. Pull tight.

Repeat steps 3 through 6 until you have a small loop at the end and your weave is long enough to wrap around your tool.

Attach a lacing need to your short piece of paracord. Toward the bottom of one side, insert the needle and thread the cord through as shown.

Thread the cord through a hole across from the first.

Move to the next hole up and continue weaving back and forth until you reach the top.
Once you reach the top, insert the cord through a hole on the opposite side and weave back and forth until you reach the bottom.

When you have finished lacing both sides, trim and melt all excess cords.

Use the clip to attach to your loop closing the top or use it to attach to a key ring or belt loop.
