Two Strand Double Cow's Hitch

Some more complicated tutorials may tell you to make a two strand double cow's hitch for the base of the bracelet. This tutorial will walk you through the process.

Materials

Paracord for your project

Buckle

Step 1: Insert the middle of your cord down through one side of your buckle.

Step 2: Pull the strands through your loop and pull tight. This is a cow's hitch. You may want the right side a few inches longer than the left so adjust as needed.

Step 3: With the right cord, insert it down to the right of your cow's hitch and bring to the left of itself. Pull tight.

Step 4: Now bring the same cord up through the back of the buckle and bring under and to the right of itself. Pull tight.
You should now have two cow’s hitches. We’ll use the strand on the left as A.

Step 5: Bring strand A down through the other side of your buckle and to the left of itself.

Step 6: Pull the cord to the length needed for your bracelet. Then cross the cord over itself to the right.

Step 7: Bring the end up through the buckle and under itself and to the right. Pull tight to form a cow’s hitch.

Step 8: Now with cord B, insert it down through the buckle to the right of itself and to the left of cord A.

Step 9: Pull cord B so it is the same length as cord A. Then cross B over itself toward the left.
Step 10: Bring cord B up through the back of the buckle then under itself and to the left. Pull tight.

You should now have two cow’s hitch knots on each end of your buckles with two strands in the middle. If your working ends are uneven, you can adjust your knots. You are now ready to start weaving your bracelet.
